

LinkHash

A Transparent, Decentralized Growth Engine for Web3.0 Marketing and Meme Coin Incubation.

Our official website: link-hash.com

1. Introduction

LinkHash is a Web3.0 reward platform that connects advertisers, app developers, meme coin teams, and Web3.0 communities through transparent, decentralized marketing. Users perform simple promotional tasks, such as sharing links, writing reviews, completing surveys, installing apps and receive crypto rewards for real, verifiable actions. Our mission is to build the most efficient human-powered growth engine for Web2.0 and Web3.0 products alike.

2. Vision

Modern digital promotion suffers from three major problems:

- Fake engagement (bots, farms)
- High costs with unpredictable performance
- Lack of transparency in a delivery and conversion

LinkHash solves this through a public, rule-driven, reward-on-completion model where:

- All progress is visible
- Approvals are transparent
- Rewards are automatic and verifiable.

Whether for apps, websites, DEX tokens, or pump.fun coins, LinkHash provides organic, community-driven growth without bots.

3. Platform Overview

The LinkHash ecosystem is built around two major pillars:

Campaign Marketplace

A reward-based task platform where advertisers launch promotional campaigns and users earn crypto by completing tasks. Supported campaign types are as follows:

- Share links on X, Instagram, TikTok or blogs
- Install apps and write reviews (Google Play / App Store / DAPP store)
- Answer surveys about markets, products or opinions
- Promote websites with short reviews
- Custom tasks defined by the advertiser

Why advertisers choose LinkHash

- All progress is public
- Rules clearly defined with no ambiguity
- Real users, preventing bots via various verifications
- Transparent approval and appeals system
- Anti-spam heuristics and manual review

Why users love LinkHash

- Simple tasks, instant crypto rewards

- Fun, gamified UX
- Fair approval system
- Visible task queue and payout tracking
- Various crypto are chosen for rewards

This system is already used by early partners including D’CENT Wallet, HEAL NEXUS, various meme coin teams, app developers and Web3.0 communities.

Meme Coin Growth & Incubation Engine

LinkHash is evolving beyond campaigns and now provides end-to-end support for meme coin launches across ecosystems (pump.fun, 4meme, and more).

What LinkHash provides for meme coin teams

1. Early Social Boost

Meme projects on DEX/pump.fun have a higher probability of success if there is initial hype.

LinkHash solves this by activating its community

- Initial X traffic
- Meme creation competitions
- Influence-style endorsement distribution
- Telegram community growth
- Quick awareness bursts in early hours

2. Structured Marketing Campaigns

- Retweet/share tasks
- Meme creation contests
- App-style tasks (if utility comes later)
- Survey-style community feedback tasks

All with transparent reward distribution

3. Community-Based Incubation

For selected meme projects, LinkHash can offer ongoing incubation

- Market making
- Long-term branding support
- Regular promotional pushes
- Content creation cycles
- Dedicated Telegram/X growth bursts
- Advisory on tokenomics and community retention

4. Trust by Association Effect

Coins incubated by LinkHash gain the following:

- Access to the LinkHash userbase
- Stronger legitimacy
- Defined marketing playbooks
- Ongoing visibility across campaigns

LinkHash becomes a launchpad-like growth partner, but powered by real people instead of just bots.

4. System Features

Promote apps or websites and earn crypto: Users perform real actions with real impact.

Rewards are fair, instant (through the power of crypto) and public.

Promote an advertiser's website: Short-form content + link sharing = SEO + traffic + organic visibility

Install an advertiser's app and leave a review: A simple mobile growth channel for apps

Answer surveys from advertisers: Advertisers collect high-quality user opinions about markets, price forecasts or product feedback.

Built for two sides - one transparent system

- Data-driven placements
- Visible progress
- Anti-spam / verification system
- Clear consequences for violations

These values are reinforced throughout the platform.

5. Target Customers & Use Cases

Advertisers

- App developers
- Web services
- E-commerce platforms
- Fintech & Web3.0 products
- SEO agencies

Crypto Project Teams

- Pump.fun projects needing early exposure
- DEX-listed tokens requiring sustained hype
- 4meme and other launchpad tokens
- Community based coins seeking incubation

Contributors

- Web3.0 native users
- Airdrop participants
- Community builders
- Meme creators
- Social media active participants

6. LinkHash Token (LHX)

- Listed on pump.fun. CA: 9LrT8gAKJ5qUJA1wJoQRrVfapJGrNnU2ca5UYiJipump
- Rewards for contributors
- Utility in campaign boosting or features
- Staking for advertiser visibility priority
- Governance for campaign approval systems

7. Plans for expansion

- => Dedicated meme coin launch partner program
- => AI powered anti-spam guard
- => Advanced advertiser analytics dashboard
- => Multi-chain reward expansion (currently mainly on Solana)
- => Automated meme coin scoring system
- => LinkHash mobile app (to be uploaded on google playstore, app store and Solana DAPP store)
- => LHX token utilities expansion

8. Conclusion

LinkHash is building the next era of decentralized marketing.

- Real Users
- Real Actions
- Real Crypto Rewards
- Real Growth

By combining reward-based campaigns with meme coin incubation, LinkHash becomes a unified engine that brings attention, users and community to any Web2.0 and Web3.0 product. We believe LinkHash has the potential to become the growth layer for Web3.0.
